

M54580P/FP

7-UNIT 150mA SOURCE TYPE DARLINGTON TRANSISTOR ARRAY

DESCRIPTION

M54580P and M54580FP are seven-circuit output-sourcing Darlington transistor arrays. The circuits are made of PNP and NPN transistors. Both the semiconductor integrated circuits perform high-current driving with extremely low input-current supply.

FEATURES

- High breakdown voltage ($BV_{CEO} \geq 50V$)
- High-current driving ($I_{O(max)} = -150mA$)
- Active L-level input
- With input diodes
- Wide operating temperature range ($T_a = -20$ to $+75^\circ C$)

APPLICATION

Drives of relays, printers and indication elements such as LEDs, fluorescent display tubes and lamps, and interfaces between MOS-bipolar logic systems and relays, solenoids, or small motors

FUNCTION

The M54580P and M54580FP each have seven circuits, which are made of output current-sourcing Darlington transistors consisting of PNP and NPN transistors. Each PNP transistor has a diode and resistance of $7k\Omega$ between the base and input pin. Its emitter and NPN transistor collectors are connected to the V_s pin (pin 9). Resistance of $50k\Omega$ is connected between each output pin and GND pin (pin 8). Output current is 150mA maximum. Supply voltage V_s is 50V maximum.

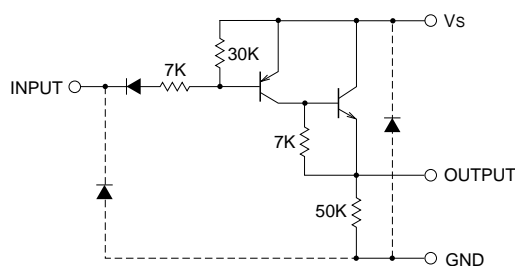

The M54580FP is enclosed in a molded small flat package, enabling space-saving design.

PIN CONFIGURATION

16P4(P)
Package type 16P2N-A(FP)

The seven circuits share the V_s and GND.
The diode, indicated with the dotted line, is parasitic, and cannot be used.
